## Description

SFP+-10GB-ER Transceiver is designed for 10GBASE-ER/EW, and 8.5G/10G Fiber- Channel applications.
The transceiver consists of two sections: The transmitter section incorporates a colded EML laser. And the receiver section consists of a PIN photodiode integrated with a TIA. All modules satisfy class I laser safety requirements. OPTONE SFP+-10GB-ER Digital diagnostics functions are available via a 2 -wire serial interface, as specified in SFF-8472, which allows real-time access to device operating parameters such as transceiver temperature, laser bias current, transmitted optical power, received optical power and transceiver supply voltage.

## Notes:

[1] Measured with conformance test signal for $\operatorname{BER}=10^{-12}$. The stressed sensitivity values in the table are for system level BER measurements which include the effects of CDR circuits. It is recommended that at least 0.4 dB additional margin be allocated if component level measurements are made without the effects of CDR circuits.

## Notes:

[1] Module circuit ground is isolated from module chassis ground within the module.
[2]. should be pulled up with $4.7 \mathrm{k}-10 \mathrm{k}$ ohms on host board to a voltage between 3.15Vand 3.6V.
[3]Tx_Disable is an input contact with a $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$ pullup to VccT inside the module.
[4]Mod_ABS is connected to VeeT or VeeR in the SFP+ module. The host may pull this contact up to Vcc_Host with a resistor in the range $4.7 \mathrm{k} \Omega$ to $10 \mathrm{k} \Omega$.Mod_ABS is asserted "High" when the SFP+ module is physically absent from a host slot.
[5] RS0 and RS1 are module inputs and are pulled low to VeeT with > $30 \mathrm{k} \Omega$ resistors in the module.
